EMAIL

mazurenko-alexey@mail.ru

TELEGRAM

t.me/amazurenk

LOCATION

Moscow, Russia

WORK MODE

on-site / hybrid / remote

SKILLS

Programming

Python TypeScript JavaScript

LLM & agents

LLM API LangChain Prompt Engineering
Function / Tool Calling Agentic Workflows

RAG & quality

RAG Evaluation sets Prompt testing

Backend

FastAPI PostgreSQL Redis
Node + Express

Frontend

React Next.js Redux Toolkit Svelte
Styled-Components Jest

Infrastructure

Docker Kubernetes CI/CD Webpack
Git

ABOUT

- AI engineer with 7+ years of frontend experience.
- Previously specialized in frontend (React, Next.js).
- I build production-ready AI applications in Python and FastAPI.
- My frontend background helps me ship complete end-to-end products — focused on reliability, performance, scalability and business value.
- Passionate about applying AI to real business problems.
- Continuously learning new technologies.

PROFILE

Early-career AI Engineer with 7+ years of commercial software development experience. I specialize in building **LLM applications and RAG systems** in Python and FastAPI.

I build full-cycle AI solutions: document processing, relevant-context retrieval, LLM answer generation, source citation and result streaming.

I work with RAG, LLM APIs, LangChain, prompt engineering, function / tool calling and agentic workflows. I pay particular attention to answer quality, prompt testing, edge-case handling and context optimization.

A strong background in software engineering and frontend development (React / Next.js) lets me build **end-to-end AI products** on my own — from the backend and AI pipeline to the user interface.

EXPERIENCE

Senior Frontend Developer

MTS Web Services

Apr 2020 — present · Moscow

Development and evolution of corporate web products and integration solutions.

“MTS Profile” — a module for storing and visualizing customer data with access management.

“Ecosystem Widgets” — an embeddable navigation and personalization module for B2C/B2B products.

Key responsibilities

- Development of new functionality and evolution of existing products.
- Requirements analysis and preparation of technical solutions.
- Design of internal architecture and integration scenarios.
- Development and integration of frontend components.
- Refactoring of existing code and code review.
- Development of reusable components with Storybook.
- Writing unit and integration tests.
- Analysis and resolution of production incidents as part of 3rd-line support.
- Preparation of technical documentation.
- Mentoring and onboarding of new team members.

Key achievements

- Implemented the profile-owner change model.
- Implemented user-data verification via Gosuslugi using biometrics.
- Implemented access-recovery and sign-in scenarios and a history of authentication-method changes.
- Implemented payment methods and bank-card management.
- Introduced a model for managing linked accounts.
- Integrated ecosystem widgets into the company's digital products.

Stack: React, Next.js, TypeScript, Redux Toolkit, Svelte, Styled-Components, Webpack, Jest, Node.js, Express.

Process: Scrum, Jira, Confluence.

PROJECTS

AI assistant with RAG (Retrieval-Augmented Generation)

Upload PDF / Word / Excel and ask questions about the content, with answers linked to source pages.

GitHub: github.com/Iyakoway/ai-RAG-chat

Demo: lyakoway-rag-chat.hf.space

Features

- Search over PDF, Word (.docx) and Excel (.xlsx).
- Category filtering and multiple documents at once.
- Clickable citations [1], [2] linking to the exact file and page.
- Embedded PDF viewer.
- Real-time answer streaming (SSE), dialog history, light / dark theme and RU / EN switching.

Result

- AI assistant for construction documentation: questions over cost estimates, SNiP / GOST standards and design docs (PDF / Excel / Word) with source-linked answers.
- A single entry point instead of manually searching dozens of files.
- Access control — contractors and subcontractors see only their own documents.

Stack: Python, FastAPI, RAG, ChromaDB, fastembed, SQLAlchemy, LLM API, Ollama, React, TypeScript, Vite.

RAG pipeline: document processing → chunking → embeddings → relevant-context retrieval → LLM answer generation → source citation.

EDUCATION

MSc — Applied Mathematics · 2014

MGSU — Institute of Fundamental Education
