+7 (977) 270-09-30

EMAIL

mazurenko-alexey@mail.ru

TELEGRAM

t.me/amazurenk

LOCATION

Moscow, Russia

WORK MODE

on-site / hybrid / remote

SKILLS

Programming

Python TypeScript JavaScript Bash

LLM & agents

LLM API LangChain Prompt engineering

Function / tool calling Agent orchestration

Token budgeting

RAG & quality

RAG Evaluation sets Prompt testing

Backend

FastAPI PostgreSQL Redis

Node + Express

Frontend

React Next.js Redux Toolkit Svelte

Storybook Jest

Infrastructure

Docker Kubernetes CI/CD Webpack

Git

ABOUT

- Comfortable both in a product team and working independently; involved across the full product lifecycle.
- Take ownership of outcomes and resolve issues quickly.
- Write clean, maintainable, performant code (SOLID, DRY, KISS, OOP).
- Design architecture to fit the project; enjoy optimizing and evolving existing code.

PROFILE

Engineer with ~7 years of software development experience; for the last 2+ years focused on LLMs and agentic systems at MWS AI (MTS ecosystem). I design and tune AI agents for real business scenarios: workflows, function / tool calling, orchestration and error handling. I build prompt flows and evaluation sets, optimize context usage and token budget, and take solutions to production. Before AI, I worked as a Senior Frontend Developer with experience in architecture design, integrations and mentoring, which lets me build products end-to-end. MSc in Mathematics (MGSU).

EXPERIENCE

AI Engineer

MTS Web Services (MWS AI)

Apr 2024 — present · Moscow

Software development, AI solutions

Agents & orchestration

- Designed and tuned agentic systems for business scenarios: workflows, function / tool calling, error handling and recovery.
- Built AI agents for content generation and for automating the development process.
- Researched and applied multi-agent orchestration approaches, tracking current industry practices.

Prompts & quality

- Developed and iteratively improved prompt flows; tested them for accuracy, stability and edge cases.
- Created evaluation sets for regression testing of answer quality.
- Optimized LLM context handling: compression, prioritization, token-budget management.

Engineering, infrastructure & R&D

- Contributed to building the platform end-to-end: backend (Python, FastAPI), frontend (React / Next), infrastructure (Docker, Kubernetes, CI/CD).
- Built skills and helper scripts in Python / Bash, maintained API documentation; worked with open-source projects.
- Explored new approaches, validated hypotheses and shipped best practices into the product.

Senior Frontend Developer

MTS Web Services

Sep 2019 — Apr 2024 · Moscow

"MTS Profile" and "Ecosystem Widgets" products

Responsibilities

- Extended existing functionality and built new features; analyzed requirements and prepared technical solutions.
- Designed internal architecture and integration scenarios; ran refactoring and code review.
- Wrote reusable components (Storybook), unit and integration tests, and maintained documentation.
- Handled 3rd-line support incidents, mentored and onboarded colleagues.

Achievements

- Implemented profile-owner transfer and a model for managing linked accounts.
- Implemented user-data verification via Gosuslugi using biometrics.
- Implemented access recovery, sign-in methods and their history, plus payment and bank-card management.
- Integrated ecosystem widgets across all of the company's digital products.

Stack: React + Next, Redux Toolkit, Svelte, TypeScript, Styled-Components, Webpack, Jest, Node + Express. Scrum, Jira, Confluence.

EDUCATION

MSc in Mathematics · 2014

MGSU — Institute of Fundamental Education

BSc in Mathematics · 2012
